Everyone is expected to put some effort into making the world a better place to live.
We continually strive to proactively participate in the community's life and to support economic growth and culture development and to take care of our children's future.

Care for environment

Each of us can contribute to preserving the environment in the country where we live and work. In 2009, Baltic International Bank participated in a worldwide tree planting campaign established by the United Nations Environment Programme (UNEP). Our environmentally-minded staff members engaged in volunteer greenery planting activities in Riga. They planted trees and roses in Viesturdarzs, one the city's oldest parks.

By the end of 2009, more than 7.4 billion trees had been planted under the United Nations Billion Tree Campaign. The goal was exceeded, with over 400 million trees planted. Having joined the worldwide campaign, Baltic International Bank had celebrated its sixteenth anniversary.

Summer internships for children

A high-quality education and serious attitudes towards future career choices is very important to our children's future success. Every year, our employees can enrol their children in the summer work program. The program gives children the opportunity to gain-real-world and hands-on experience while working for the bank.

The young assistants help filing away document piles into their proper folders, maintain correspondence archives, perform messenger/courier activities, and enter information into electronic databases.

Some of our interns come to work for Baltic International Bank following their graduation.
